

Pendant Stations LADY Series

# Pendant Stations <br> LADY Series - LA type single-row 

## Main Features

The new LADY series single-row push-button stations for auxiliary circuits are the result of a blend of Ravioli's long experience in the field, detailed studies in ergonomics, and the use of innovative, modern design and materials, in compliance with the best technology available today.
In designing the product particular attention was paid both to easy handling features and to the technical aspects, in order to ensure usage also in heary-duty circumstances.
All the materials, which come into direct contact with the environment, are resistant to atmospheric agents, oils, temperature changes and are shockproof. The rubber gaskets ensure optimal protection against dust and liquids.
The optimised internal space allows to make all connections easily and quickly. Bridge connections have been projected in order to reduce cabling time and are available upon request.
LADY push-button station is offered in 6 different sizes, ranging from 2 to 12 buttons devices and various controls and switches can be mounted on each type.
LAP versions for bridge cranes and hoists and LAE for building
cranes are available. The emergency stop push-button has been designed in according to EN 418 regulations. The NC contacts feature guaranteed opening (EN 60947-5-1) and can be supplied also in the 2NC increased safety version. All buttons are marked with international symbols.
The switches have self-cleaning sliding contacts in silver alloy.

## TECHNICAL FEATURES

| Compliance with EEC Directives | 2006/95 CE 93/68 CE 98/37 CE 2004/108 CE |
| :---: | :---: |
| Compliance with rules | EN 60947-1 EN 60947-5-1 EN 60529 |
|  | EN 60204-1 EN 60204-32 EN 418 |
| Insulation voltage | $660 \mathrm{~V} \sim$ |
| Test voltage | $2500 \mathrm{~V} \sim$ |
| Max. operating voltage | $400 \mathrm{~V} \sim$ |
| Temperature range | Working $\quad-25^{\circ} \mathrm{C}+70^{\circ} \mathrm{C}$ |
|  | Storage $\quad-40^{\circ} \mathrm{C}+70^{\circ} \mathrm{C}$ |
| Insulation | Class II (double insulation) |
| Protection degree | IP 65 |
| Operating positions | All positions |
| Cable entry | $2-4$ buttons: rubber sleeve D. $12-17 \mathrm{~mm}$ $6-12$ buttons: rubber sleeve D. $15-20 \mathrm{~mm}$ |
| Homologation | CE |

## Dimensions

## For Your Safety

Single-row LADY series pendant stations comply with the current safety rules, and in particular:

- 98/37 CE Machine Directive
- 2006/95 CE Low Voltage Directive
- 93/68 CEE Low Voltage Directive
- 2004/108 CE EMC Directive
- EN 60204-32 Lifting Machinery Safety Regulations
- EN 60947-1 Low-voltage switchgear and controlgear
- EN 60947-5-1 Control circuits devices and switching elements

## Guaranteed Quality Product

Single-row LADY series pendant stations are guaranteed by our EC Certificate of Conformity, available upon request, in which it is declared that such product was created by RAVIOLI in accordance to defined and recognised Safety Regulations, and in compliance with the quality standards stated in our UNI EN ISO 9001:2000 Quality System Certificate.

## MK Switching Element

## Main Features

The MK push button elements are inside parts of the LADY pendant stations.
Casing is made in self-extinguishing nylon glass.
Double breaking and self-cleaning sliding contact elements are in silver alloy.
Screws and springs in inox steel.
MK elements are supplied as push button station spare parts.

According to FEM 9.941 rules

# Types and Codes to be used when ordering 

Single-row LADY series pendant stations can be produced in LAP versions for bridge cranes and in LAE versions for building cranes.

| No. buttons | LAP type Codes | LAE type Codes |
| :---: | :---: | :---: |
| 2 | D LAP2 |  |
| 3 | D LAP3 |  |
| 4 | D LAP4 | D LAE4 |
| 6 | D LAP6 | D LAE6 |
| 8 | D LAP8 | D LAE8 |
| 10 | D LAP10 | D LAE10 |
| 12 | D LAP12 | D LAE12 |
|  |  |  |

For standard versions: see pages 6 and 7 .

## Installation and maintenance instructions

## INSTALLATION

The push-button stations must be installed by a qualified staff, according to safety law in force (see page 3). Electrical current must be switched off before to effecting the connection.
Internal cabling must be carried out in strict compliance with the electrical drawings of the controlled machine.
After installing, a test of the emergency stop as well as all other buttons operated by the pendant station, must be executed.
Avoid prolonged use of oils and acidic substances during usage, as they may cause damage to the pendant station.
CABLING
Cabling should be carried out as follows:

- remove cover (2) and loosen screws
- remove wire clamp by loosing the screws holding it in place
- assess diameter of available cable and cut rubber sleeve (3) so that, once the cable has been inserted, the device will be perfectly water- and dust-proof.
- tighten wire clamp, ensuring that cable is securely fixed
- carry out cabling procedure
- close pendant station paying attention to correct positioning of rubber gaskets.

## INSERTION OF LABELLING

Labelling of the individual buttons may be replaced when cabling has been completed.

## MAINTENANCE

In order to ensure perfect working of equipment over time, a programmed periodic maintenance is adviced.
All operations must be done by authorised staff and the exclusive use of original spare parts is to be considered mandatory.
Any part showing signs of wear or defects should be replaced even without delay, in order to ensure maximum safety of operation at all times.
In particular, it is necessary to:

- clean push-button station periodically, using non-aggressive products and compressed air on external parts and compressed air only on internal parts
- check that all screws on pack are tightened
- check internal cabling and that connecting terminals are tightly closed
- check that all gaskets and rubber parts are in good working order
- check that casing is in good condition
- check correct working of the equipment by carrying out a series of test manoeurres

Any alteration of the parts of the push-button station will make the manufacturer's guarantee decline.

RAVIOLI declines any responsibility for damage deriving from incorrect installation or improper use of the product.

## Standard Executions

The types of push button pendant stations shown here are standard versions designed for use on the best-known bridge cranes, hoists and building cranes in the world. A mechanical interlock for opposite movements is mounted as standard.
Thanks to the versatility of assembly, personalised executions are available upon request.

Switching elements on standard versions
