| NOTE | <ol style="list-style-type: none"> All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. Measure before Choke. Efficiency before choke. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." ■ Configuration and Commissioning

The application program (data base) for ETS can be downloaded via <http://www.meanwell.com/productCatalog.aspx>

■ Typical application

◎ Application 1: Powering KNX Bus Only

KNX Bus

Bus wiring consideration:

1. the maximum number of bus devices connected is 64.
2. the maximum length of a line segment is 350 m, measured along the line between the power supply and the furthest device bus.
3. the maximum distance between two bus devices cannot exceed 700 m.
4. the maximum length of a bus line is 1000 m, keeping into account all segments.
5. It is possible to connect two KNX-20E-640 in parallel with following conditions: Two chokes installed in one line with at least 200m apart.

◎ Application 2: Powering KNX Bus and KNX device

KNX Bus

Note:

1. Use only ancillary output of KNX-20E-640 to power the KNX device
2. The total current $I_1 + I_2$ should be equal or less than 640mA. $I_1 + I_2 \leq 640\text{mA}$
3. The above Bus wiring consideration is still applicable

■ Recommended Screwdriver, Wire and Torque Setting

1. Screwdriver (Width*Thick): Slotted screwdriver 2.5*0.4~3.5*0.6
2. Wire: 0.5~4.0mm² solid core or 0.5~2.5mm² finely stranded
3. Torque: 0.8Nm
